Sequence 16967, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
RAPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196-136
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ; OTHER INFORMATION: Identity of amino acid at the above locations are unknown. 2: uniprot_trembl:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

01-MAR-2004 (TrEMBLrel. 26, Last annotation update)
Mus musculus adult male testis cDNA, RIKEN full-length enriched
library, clone:4933401B17 product:hypothetical Tubulin-tyrosine ligase
containing protein, full insert sequence.
Name=1700019P01Rik;

This invention relates to a novel testis-specific tubulin tyrosine-ligase

-like polypeptide, designated the BGS-42 polypeptide. The invention may

be useful for the development of compounds with a cytostatic, respiratory

Gen, gastrointestinal-Gen, neuroprotective, endocrine-Gen,

antinalammatory, anabolic, hypertensive, osteopathic, nootropic,

antingarkinsonian, antiathritic, antiasthmatic, anti-HIV, antibacterial,

immunosuppressive, antiasbornteic or dermatological activity acting as

tyrosine ligase modulators. In addition, the disclosed sequences may be

tyrosine ligase modulators. In addition, the disclosed sequences may be

cused for diagnosing a pathological condition or a susceptibility to a

cused for diagnosing a pathological condition as a disorder related to aberrant

cused for diagnosing a pathological condition, as disorder related to aberrant

cused for diagnosing a pathological condition, as disorder related to aberrant

cused for diagnosing a pathological condition, as disorder related to aberrant

cused for diagnosing a medical condition, as disorder related to aberrant

cubulin ligase activity, a disorder related to aberrant

cubulin ligase activity, a disorder related to aberrant

cubulin ligase activity, a disorder related to aberrant

cubulin ligase activity, a disorder related to aberrant

cubulin ligase activity, a disorder related to aberrant

cubulin ligase activity, a disorder, colon cancer, pubmonary disorders,

cubulin ligase activity, a disorders, colon cancer, sometri, concer,

cubulin ligase activity, a disorders, colon cancer, propeptide, polynucleotide, or their modulators are also useful for

cueval disorders, brain cancer, liver cancer, or proliferation, cof the testis, lung, small intestine, brain or lymph tissue. The BGS

creating infertility, Cushings syndrome, emphysema, preumonia, Addison's

disease, acromegaly, Alzheimer's disease, or Parkinson's disease.

creation including arthritis, asthma, AlbS, sepsis, acne, Sjogren's

chiesease or scleroderma. This invention relates to a novel testis-specific tubulin tyrosine-ligase

"Inke polypeptide, designated the BGS-42 polypeptide. The invention may

"Like polypeptide, designated the BGS-42 polypeptide. The invention may

"Cen, gastrointestinal-Gen, neuroprotective, endocrine-Gen,

"Cantinflammatory, anabolic, hypertensive, osteopathic, nootropic,

antiparkinsonian, antiarthritic, antiasthmatic, anti-HIV, antibacterial,

"Communosuppressive, antieborratheic or dematological activity acting as

tyrosine ligase modulators. In addition, the disclosed sequences may be

useful for gene therapy. The BGS-42 polypeptide or polymucleotide can be

used for diagnosing a pathological condition or a susceptibility to a

pathological condition in a subject, and for preventing, treating or

ameliorating a medical condition, such as a disorder related to aberrant

tubulin ligase activity, a disorder related to aberrant tubulin
carboxypeptidas activity, adsorder related to aberrant tubulin
carboxypeptidas activity, adsorders, colon cancer, stomach cancer,

carboxypeptidas activity, adsorders, colon cancer, stomach cancer,

carboxypeptidas activity, adsorders, colon cancer, stomach cancer,

carboxypeptidas activity, adsorders, inver cancer, or proliferative condition

carboxypeptides, plang, small intestine, brain or lymph tissue. The BGS-42

polypeptide, polymucleotide, or their modulators are also useful for

treating infertility, Cushing's syndrome, emphysema, pneumonia, Addison's BGS-42 polypeptide; cytostaelity are interpolypeptide; cytostaelity respiratory-Gen; gastrointestinal-Gen; neuroprotective; endocrine-Gen; antiinflammatory; anabolic; hypertensive; osteopathic; noctropic; antiparkinsonian; antiatrhitic; antiasthmatic; anti-parkinsonian; antisthritic; antiasthmatic; anti-parkinsonian; antisteborrheic; dermatological; tyrosine ligase modulator; gene therapy; tubulin ligase; tubulin-carboxypeptidase; cellular proliferation; reproductive disorder; testicular disorder; pulmonary disorder; lung cancer; gastrointestinal disorder; concer; proliferative condition; restis; lung; brain; lymph tissue; infertility; Cushing's syndrome; emphysema; phanin; lymph tissue; infertility; Cushing's syndrome; parkinson's disease; archifertility; Alzheimer's disease; parkinson's disease; arthritis; asthma; ADS; е. 9 New testis-specific tubulin tyrosine-ligase-like BGS-42 polypeptide, useful for preventing, treating or ameliorating a medical condition, eaberrant cellular proliferation, reproductive disorders or testicular Human tubulin tyrosine ligase protein consensus sequence SeqID13. testis-specific tubulin tyrosine-ligase-like polypeptide; sepsis; acne; Sjogren's disease; scleroderma; human. disease, acromegaly, Alzheimer's disease, or Parkinson's disease. The BGS-2 polypeptide can be used as a preventive agent for immunological disorders including arthritis, asthma, AIDS, sepsis, acne, Slogren's disease or scleroderma. The antibodies may be used to purify, detect and trarget the BGS-42 polypeptides. The present sequence is that of the tubulin tyrosine ligase protein consensus sequence which was used in the exemplification of the invention.
                                                                                                                                                                                                                               9

This invention relates to a novel testis-specific tubulin tyrosine-ligase—
like polypeptide, designated the BGS-42 polypeptide. The invention may
be useful for the development of compounds with a cytostatic, respiratory
CD be useful for the development of compounds with a cytostatic, respiratory

                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel testis-specific tubulin tyrosine-ligase—like polypeptide, designated the BGS-42 polypeptide. The invention may be useful for the development of compounds with a cytostatic, respiratory-Gen, gastrointestinal-Gen, neuroprofective, endocrine-Gen, antinflammatory, anabolic, hypertensive, osteopathic, nootropic, antiparkinsonian, antiarthritic, antisthmatic, anti-HIV, antibacterial, immunosuppressive, antisebornheic or dermatological activity acting as tyrosine ligase modulators. In addition, the disclosed sequences may be useful for gene therapy. The BGS-42 polypeptide or polynucleotide can be used for diagnosing a pathological condition or a susceptibility to a pathological condition, such as a disorder related to a berrant tubulin ligase activity, a desrant cellular proliferation, reproductive

disorders, testicular disorders, testicular cancer, pulmonary disorders, lung cancer, gastrointestinal disorders, colon cancer, stomach cancer, neutral disorders, brain cancer, liver cancer, or proliferative candition of the testis, lung, small intestine, brain or lymph tissue. The BGS-42 polypeptide, polynucleotide, or their modulators are also useful for treating infertility, Cushing's syndrome, emphysema, pneumonia, Addison's disease, acromegaly, Alzheimer's disease, or Parkinson's disease. The BGS-42 polypeptide can be used as a preventive agent for immunological disorders including arthritis, asthma, AIDS, sepsis, acne, Sjogren's disease or scleroderma. The antibodies may be used to purify, detect and target the BGS-42 polypeptides. The present sequence is that of the human BGS-42 protein (partial sequence) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         252

Primer sets for synthesizing polynucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

full-

Claim 8; SEQ ID NO 15921; 2537pp + Sequence Listing; English.

The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprisentary to the
complementary strand of a polynucleotide which comprises one of the 5602
nucleotide sequences defined in the specification, where the
oligonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence, where the
complementary strand of a polynucleotide of sequence complementary to a
complementary strand of a polynucleotide of sequence where the
complementary strand of a polynucleotide of sequence where the
complementary strand of a polynucleotide of sequence where the
complementary strand of a polynucleotide of sequence where the
complementary strand of a polynucleotide of sequence where the
complementary strand of a polynucleotides and the combination of
the 5'-end sequence sets as least 15 nucleotides and the combination.
The primers are useful for synthesising polynucleotides,
complementary. The primers are useful for synthesising polynucleotides,
the full-length cDNAs. The primers are also useful for the
comparable and or diagnosis of the abnormality of the full-length
comparable and a polynucleotides and AAH13633 to AAH13628 represent
complementary strands and sequences; and a sequence of the
complementary strands and one used in the exemplification of the present invention

disorders.

New cytoskeleton-associated proteins and polynucleotides, useful fo diagnosing, preventing and treating cell proliferative, autoimmune, inflammatory, neurological, cell motility, reproductive and muscle

Ë

Claim 1; Page 130-131; 194pp; English.

The invention relates to human cytoskeleton-associated polypeptides
(CYSKP) and their associated polynucleotide sequences. The sequences are useful in the treatment of disorders associated with overexpression or underexpression of CYSKP in a patient. The disorders include cell
underexpression of CYSKP in a patient. The disorders include cell
proliferative disorders (such as cancer, actinic keratosis,
arteriosclarosis, cirrhosis, hepatitis and psoriasis),
autoimmune/inflammatory disorders (such as, asthma, atherosclarosis,
cutoimmune/inflammatory disorders (such as, asthma, atherosclarosis,
osteoporosis, Crohn's disease, rheumatoria arthritis, diabetes mellitus
and anaemia), vesicle trafficking disorders (such as
hypertcholesterolaemia, diabetes insipidus, Grave's disease and goitre),
as epilepsy, stroke, cerebral neoplasms, Alzheimer's disease,
disorders (such as endometriosis and polycystic ovary syndrome), muscle
disorders (such as endometriosis and polycystic ovary syndrome), muscle
disorders (such as myocarditis, migraine, hypertension, hypoglycaemia,
myocardial infarction, epilepsy and muscular dystrophy, appinal cord
cerebral palsy and mental disorders (such as anxiety and schizophrenia).
Sequences AAU74330-AAU74363 represent human CYSKP of the invention

The polymucleotides and the polypeptides of the invention can be used for gene therapy, protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polynucleotides are particularly useful for diagnosing, treating or preventing cell profiferative disorders (e.g. cancers including adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's disease, acquired immunodeficiency syndrome (AIDS), Goodpasture's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             QLVDIACKVCQAYLGQLEHEDIDTSADAVEDLTEAEWEDLTQQYYSLVHGDAFISNSRNY 113

Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB59711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the invention are isolation and characterisation of the DNA and protein sequences of the control of the breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunouppressive; noctropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabatic; antibarmatory; anticulex; vulnerary; uniconvulsant; antibacterial; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly continued and agonists may also be used in the diagnosis of cancer, proteins, agonists and adomists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's cardiovascular disorders such as mycoardial ischaemias, wound healing; and allergies and ulcerative colitis; and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional and envisional
                                                                                                                  Breast and ovarian cancer associated antigen protein sequence SEQ ID 617.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymocleotides are useful in gene therapy. A composition containing a polypeptide or polymocleotide of the invention may be used to traat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinhetic activity, chemotactic/chemokinhetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         301

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    15-APR-2004.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Wu TD,
This invention relates to a novel testis-specific tubulin tyrosine-ligase like polypeptide, designated the BGS-42 polypeptide. The invention may be useful for the development of compounds with a cytostatic, respiratory cen, gastrointestinal-Gen, neuroprotective, endocrine-Gen, antiinflammatory, anabolic, hypertensive, osteopathic, nootropic, antiinflammatory, antisebritaic, antiasthmatic, antiinflamtory acting as tyrosine ligase modulators. In addition, the disclosed sequences may be tyrosine ligase modulators. In addition, the disclosed sequences may be tyrosine ligase modulators. In addition, the disclosed sequences may be useful for gene therapy. The BGS-42 polypeptide or polymucleotide can be used for diagnosing a pathological condition or a susceptibility to a pathological condition, such as a disorder related to aberrant tubulin ligase activity, a disorder related to aberrant tubulin carboxypeptidase activity, aberrant cellular proliferation, reproductive disorders, testicular disorders, testicular cancer, pulmonary disorders, lung small intestine, brain or lymph tissue. The BGS-42 polypeptide, polymelectide, or their modulators are also useful for reating infertility. Cushing's syndrome, emphysema, pneumonia, Addison's disease, acromegaly, Alzheimer's disease, or Parkinson's disease. The BGS-42 polypeptide can be used as a preventive agent for immunological cisorapers including arthritis, asthma, AlDS, sepsie, acne, Sjogren's disease or scleroderma. The antibodies may be used to purify, detect and target the BGS-42 polypeptides. The present sequence is that of the human CT arget the BGS-42 polypeptide to the invention. Note: The present sequence obtained from company.

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide so equencies at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosing of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, cervical cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, inver cancer, bladder cancer, pancreatic cancer, cervical cancer, colorectal cancer, cervical cancer, cancers of the central used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence cancer says and percents a TAT polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      193

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06731 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM0379-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                KFDIRQWFLVTDWNPLTIWFYKESYLRFSTQRFSLDKLDSAIHLCNNAVQKYLKNDVGRS

New testie-specific tubulin tyrosine-ligase-like BGS-42 polypeptide, useful for preventing, treating or ameliorating a medical condition, eaberrant cellular proliferation, reproductive disorders or testicular disorders.

Disclosure; SEQ ID NO 5; 343pp; English.

This invention relates to a novel testis-specific tubulin tyrosine-ligase clike polypeptide, designated the BGS-42 polypeptide. The invention may be useful for the development of compounds with a cytostatic, respiratory cere, gastrointestinal-Gen, neuroprotective, endocrine-Gen, gastrointestinal-Gen, neuroprotective, endocrine-Gen, cantipatkinsonian, anitatkinitic, antiasthmatic, antiatkinity, antiasthmatic, antiasthmatic, neuroprotective, endocrine-Gen antibatkinsonian, anitatkinitic, antiasthmatic, antiasthmatic, antibatcherial, immunosuppressive, antiseborrheic or deractological activity acting as tyrosine ligase modulators. In addition, the disclosed sequences may be useful for gene therapy. The BGS-42 polypeptide or polymucleotide can be useful for gene therapy. The BGS-42 polypeptide or polymucleotide can be cuseful condition in a subject, and for preventing, treating or apthological condition, such as a disorder related to aberrant tubulin ligase activity, a disorder related to aberrant tubulin ligase activity, adsorder related to aberrant tubulin ligase activity, adsorder related to aberrant tubulin ligase activity, adsorder related to aberrant tubulin ligase activity, adsorders, testicular cancer, pulmonary disorders, carboxypeptides activity, adsorders, concer, stomach cancer, lung cancer, gastrointestinal disorders, concer, stomach cancer, carboxypeptide, polymucleotide, or their modulators are also useful for treating infertility, Cushing's syndrome, emphysema, pneumonia, Addison's disease, acromegaly, Alzheimer's disease, or Parkinson's disease. The BGS concers including arthritis, asthma, AIDS, sepsis, acne, Sjogren's disease or scleroderma. The antibodies may be used to purify, detect and target the BGS-42 polypeptide can be used as a preventive sequence is that of the human Control which is related to the invention. Note: The present control of the invention will but was obtained from

Disclosure; SEQ ID NO 23727; 21pp + Sequence Listing; English.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                              541
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
